

What is claimed is:

1. A cosmetic pack preparation comprising (a) 5-20 wt% of polyvinyl alcohol and (b) 0.01-10 wt% of a titanium-titanium dioxide sinter.
2. The cosmetic pack preparation according to claim 1, further comprising an anionic surfactant as a component (c).
3. The cosmetic pack preparation according to claim 2, wherein the anionic surfactant of the component (c) is one or more anionic surfactants selected from the group consisting of a phosphate-based anionic surfactant, a sulfonate-based anionic surfactant, and a sulfate-based anionic surfactant.
4. The cosmetic pack preparation according to any one of claims 1-3, further comprising a water-soluble thickener as a component (d).
5. The cosmetic pack preparation according to claim 4, wherein the compound (d) is a water swelling clay mineral and/or fine particles of amorphous silicic anhydride.
6. The cosmetic pack preparation according to any one of claims 1-5, wherein the polyvinyl alcohol of the component (a) is a mixture of (A) a polyvinyl alcohol of which the aqueous solution with a concentration of 4 wt% has a viscosity at 20°C of 1 mPa·s or more, but less than 30 mPa·s and (B) a polyvinyl alcohol of which the aqueous solution with a concentration of 4 wt% has a viscosity at 20°C of 30 mPa·s or more, but less than 70 mPa·s.
7. The cosmetic pack preparation according to claim 6, wherein the weight ratio of

the polyvinyl alcohol (A) to the polyvinyl alcohol (B) in the component (a) is 0.05-2.

8. The cosmetic pack preparation according to any one of claims 1-7, further comprising a water-soluble ascorbic acid derivative and/or a water-soluble glycyrrhizic acid derivative as a component (e).

9. The cosmetic pack preparation according to any one of claims 1-8, further comprising a polyglycerol fatty acid ester as a component (f).

10. The cosmetic pack preparation according to any one of claims 1-9, wherein the anionic surfactant of the component (c) is dioctyl sodium sulfosuccinate.
